~~X~~ SUCCESS STORY 😊

My 12 year old son was diagnosed with asthma when he was 5. Against my better judgement, but not knowing what else to do at that time, he was put on a daily asthma medication, SINGULAR, and was prescribed an ALBUTEROL inhaler for emergencies. I then searched hard for someone who could wear him off pharmaceutical drugs, and met a Naturopath who did just that, with nutritional 'medicine'.

When we first consulted with Dr. Applebee, we discussed how he could further help my son, who was now off daily medication, and who only needed the inhaler if he caught a virus. Dr. Applebee explained the mechanics of subluxations that inhibit lung function, and I agreed to begin a series of adjustments.

When my son was on SINGULAR, his peak flow was at 240. When my Naturopath successfully weaned him off medication, his peak flow shot to 300, and then stabilized at 320. Shortly after seeing Dr. Applebee, his peak flow has hit an all time high of 350, and he sailed through his first virus this season (Sept 04) without the use of the inhaler, or peak flow dropping !!!
